CONFIDENTIAL — FOR INTERNAL HR USE ONLY

GlobalTech Transformation Scenario Brief

Workforce Gap Analysis — Strategic Context and Constraints

Prepared for: Lead People Analytics Manager | Review Period: FY2024–FY2027

Organization:	GlobalTech Financial Services
Total Employees:	15,000 (as of Q2 2024)
Transformation Stage:	18 months into a 36-month digital transformation program
Workforce Investment Budget:	$50,000,000 (board-approved ceiling)
Report Sponsor:	Chief Human Resources Officer (CHRO)
Board Presentation Date:	End of current week

1. Organizational Context

GlobalTech is a leading mid-market financial services firm operating across retail banking, wealth management, and commercial lending. Faced with accelerating fintech disruption, evolving regulatory requirements, and shifting client expectations toward digital-first service delivery, GlobalTech's board approved a comprehensive three-year Digital Transformation Program (DTP) in early 2023.

The DTP aims to modernize core banking infrastructure, build proprietary data and analytics capabilities, strengthen cybersecurity posture, and transition client-facing services to digital advisory models. The transformation is progressing against plan on technology delivery, but workforce capability development is lagging, creating a growing risk to delivery timelines.

> **Strategic Imperative:** GlobalTech's ability to execute the Digital Transformation Program is directly constrained by workforce capability gaps. The $50M talent investment exists specifically to close these gaps and must be allocated with precision to maximize transformation ROI.

2. Business Capabilities Required

The DTP requires GlobalTech to build the following capability areas by end of Year 3:

Capability Area	Description	Business Driver	Priority
Data Engineering & Analytics	Design, build, and maintain scalable data pipelines; develop predictive analytics models for risk and client insights	Core to DTP; enables personalization and risk decisioning	Critical
Cybersecurity Operations	Threat detection, incident response, compliance monitoring; cloud security architecture	Regulatory requirement + cloud migration risk	Critical
Digital Client Advisory	Hybrid human-digital advisory capability; digital onboarding; omnichannel service delivery	Revenue growth + client retention in digital shift	High
Cloud & DevOps Engineering	Cloud architecture, CI/CD pipeline management, infrastructure-as-code, platform reliability	Technology modernization backbone	High
AI/ML Product Development	Machine learning model development, MLOps, AI product management	Competitive differentiation; automation of manual processes	Medium-High
Regulatory Technology (RegTech)	Automated compliance monitoring, regulatory reporting automation	Regulatory compliance efficiency	Medium

3. Critical Role Segments

The following six role segments have been designated critical to DTP delivery. Workforce gaps in these segments represent the primary focus of this analysis.

Role Segment	Current Headcount	Year 3 Target	Estimated Gap	Notes
Data Engineers	42	120	~78	Highest priority; market highly competitive
Cybersecurity Specialists	31	85	~54	Regulatory timeline pressure; specialized skills scarce
Digital Client Advisors	210	350	~140	Large volume; strong internal reskilling candidate pool
Cloud/DevOps Engineers	28	90	~62	Cloud migration dependent; partner support available
AI/ML Engineers	15	55	~40	Niche; university partnerships being explored
RegTech Analysts	38	65	~27	High overlap with existing compliance staff; reskillable

4. Constraints & Boundary Conditions

Budget Ceiling

- Total talent investment budget: **$50,000,000** over 3 years (board-approved ceiling)
- Approximate split guidance: 40% external hiring, 35% reskilling programs, 15% retention incentives, 10% contingency
- Individual external hire costs (fully loaded): Data Engineer ~$180K, Cybersecurity Specialist ~$165K, Cloud/DevOps ~$160K, AI/ML Engineer ~$200K, Digital Advisor ~$95K, RegTech Analyst ~$110K

Internal Mobility Targets

- CHRO mandate: **at least 40% of gap closure** must come from internal reskilling or redeployment
- Digital Client Advisor and RegTech Analyst gaps are considered most suitable for internal mobility pathways
- Traditional banking advisors (est. 180 employees) are identified as the primary internal reskilling population

Timeline Pressures

- **Year 1 (immediate):** Cybersecurity headcount must reach 60 to meet regulatory audit requirements by Q4 2024
- **Year 1 (immediate):** Data Engineering team must reach 70 to support core data platform delivery
- **Year 2:** Cloud/DevOps and AI/ML buildout aligns with cloud migration phase (begins Q1 2025)
- **Year 3:** Full Digital Advisory transformation complete; RegTech automation live

Additional Constraints

- No large-scale redundancies planned; transformation must be additive to current workforce
- Remote-hybrid model enables national hiring (not restricted to HQ location)
- Two technology vendor partnerships (cloud provider, cybersecurity MSSP) may provide short-term contractor support to bridge Year 1 gaps
- Reskilling program lead time: minimum 6 months for technical roles; 3 months for advisory roles

5. Current Attrition Context

GlobalTech's overall annual attrition rate is 11.2%. Critical role segments experience elevated attrition due to market demand:

- Data Engineers: 18% annual attrition (industry average: 22%)
- Cybersecurity Specialists: 16% annual attrition
- Cloud/DevOps Engineers: 17% annual attrition
- AI/ML Engineers: 20% annual attrition (highest in portfolio)
- Digital Client Advisors: 13% annual attrition
- RegTech Analysts: 9% annual attrition

6. Success Metrics

The CHRO will evaluate the workforce gap analysis against these criteria:

- All critical role segments quantified with headcount and skill-level gaps at Year 1, 2, and 3 horizons
- Risk-prioritized ranking with composite scoring methodology clearly explained
- Closure strategies for each segment with specific intervention type, timeline, and cost estimate
- Total investment recommendation within $50M ceiling
- Internal mobility target of 40% demonstrated in recommendations
- Executive-ready communication suitable for board presentation
